Real Estate Teams Need Data-Driven Insights

To Navigate Raw Listing Data

Critical Challenges

- **Information Overload:** Teams are drowning in raw listing data without a clear path to actionable insights.
- **Inefficient Analysis:** No quick, automated way to compare property prices across different cities or property types.
- **Subjective Strategy:** Investment decisions are frequently made on gut feeling rather than solid evidence.

This project solves these pain points by providing a centralized, interactive view of market dynamics.

Market Summary: High-Volume Trends Across Key Texas Cities

Snapshot of Listing Density and Pricing Valuations

Market Profit Growth

Profit Analysis

Visualizing profit trends based on property value distributions.

Key Insight

Highest margins observed in Houston and Boerne markets.

Houston Leads Market Value While Single-Family Homes Dominate Inventory

Market Dominance

Houston leads the dataset with over \$81.2 million in total property price value across 48 listings, far outpacing other cities.

Value Trends

The average price per square foot across the entire analyzed market is \$208, reflecting competitive regional valuations.

Inventory Mix

Single-family homes represent the vast majority of the inventory, accounting for 427 properties (approximately 89% of the distribution).

Market Velocity

The average days on market is just 28, indicating a relatively fast-moving inventory for these premium real estate markets.

Intuitive Interactivity Built for Non-Technical Business Users

SLICERS

Filter the entire dataset by city, number of beds, and price range instantly.

MAP DRILL

Click any state or city on the geographic visual to zoom directly into local market data.

CROSS-FILTER

Select any bar chart segment (such as a specific property type or city) to automatically update all related visuals on the page.

Built for non-technical business users — zero Excel knowledge needed to extract insights.

Transforming Raw Property Data into Strategic Investment Advantage

Strategic Advantage

Identify undervalued markets and emerging hotspots before competitors do by leveraging geographic and price-per-square-foot data.

Investor Ready

Present clean, compelling data to stakeholders and investors with one-click visual reports.

Operational Efficiency

Track price trends and inventory velocity weekly without needing a dedicated analyst to manually crunch numbers in Excel.
